

Product Description

Verify Elite® is a complete NonStop security compliance and file integrity monitoring solution which continuously ensures that your Nonstop system security meets industry standards and regulations, including PCI DSS, SOX, HIPAA and GDPR.

Using regularly scheduled compliance checks, Verify Elite's Security Compliance Monitor can ensure your compliance with both compliance regulations and internal security policies.

And using regularly scheduled file integrity checks, Verify Elite's Files Integrity Monitor ensures that no unauthorized changes occur to selected groups of files.

Security Compliance Monitor

Verify Elite's Security Compliance Monitor includes comprehensive sets of categorized compliance rules, which can be modified to reflect local regulations and internal policy.

Security Compliance Monitor Key Features

- Pre-built customizable compliance rules
- Detailed reporting on regulatory compliance
- Includes rules for PCI DSS, SOX, HIPAA
- Customizable reports
- Intuitive GUI makes compliance checking and audit reporting easy.

Verify Elite's New Enhanced UI

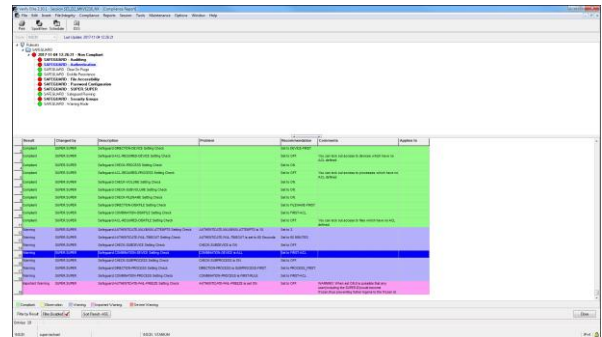

File Integrity Monitor

Verify Elite's full featured File Integrity Monitor detects unauthorized changes to selected groups of files. Each file's fingerprint is compared to an original fingerprint to determine if any unauthorized changes have been made. Alerts can be generated to provide immediate notification of unauthorized changes, and reports can be run to document file integrity.

File Integrity Monitor Key Features

- Monitors both Guardian and OSS files
- Meets PCI-DSS regulation 11.5
- Captures file fingerprints
- Full audit reporting capability
- Alerts for unauthorized changes
- Multi-Node Fileset Compare
- Easily integrated with enterprise security tools

Verify Elite's File Integrity Monitor

Compliance at your Fingertips™

Enhanced User Interface

We've made it even easier for you to address the critical file monitoring and compliance reporting requirements with significant changes to the UI, for an Enhanced User Experience.

We've also added helpful tips across the product and made it even more intuitive to use.

[Continued Overleaf]

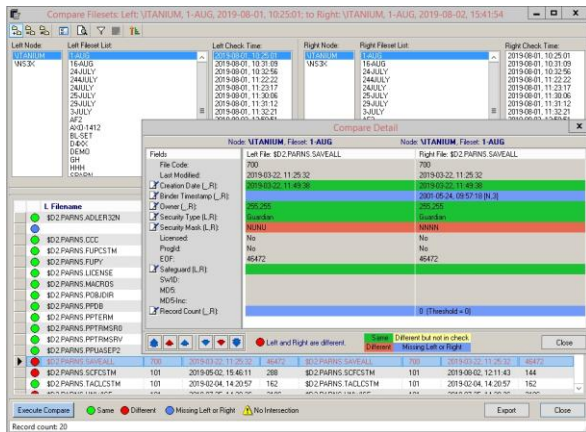

Unique File Fingerprints

File Integrity Monitor captures a unique fingerprint of all selected files including:

- Binder Time
- MD5/MD5-Inc
- Status Changed
- Last Modified
- Security Type
- Group
- EOF
- File Type
- Owner
- Safeguard
- Security Mask
- Set Uid
- Set Gid
- Record Count

Multi-Node Fileset Compare

Verify Elite's Multi-Node Fileset Compare enables the attributes of any two filesets on any two nodes to be compared to each other.

What's New in Verify Elite 2.40

Guardian Files can now be monitored for any changes to Binder Timestamp.

Additional EMS Alerts can be generated when a file check run fails or has errors, as well as when files are added or deleted from monitored filesets.

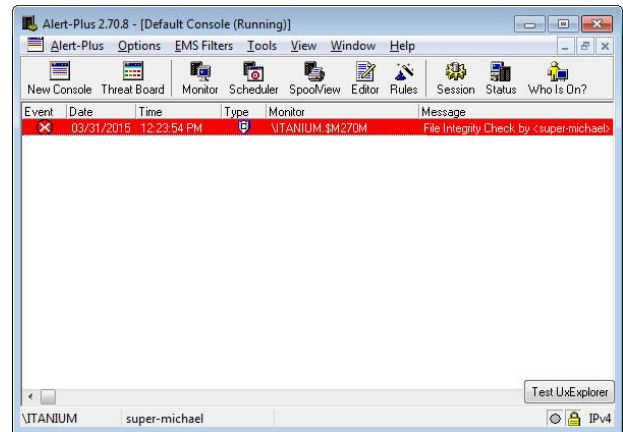

Reporting

Verify Elite includes comprehensive and flexible reporting. Schedule automated runs on multiple filesets, from hourly checks on critical files to weekly checks on less dynamic files. Or run ad-hoc interactive checks as necessary.

Real-Time Alerts Using Alert-Plus®

Use CSP's Alert-Plus® product to immediately communicate all unauthorized file changes to Security personnel.

File Integrity Alert Reported Using Alert-Plus®

Enterprise Security Integration

Verify Elite® integrates seamlessly with our suite of security products to provide a complete security solution for your HPE NonStop® servers.

Let us show you how CSP can secure your HPE NonStop servers and maintain compliance with the standards and regulations that affect you.
